Solve spatial problems sustainably
We all use the space around us every day. This includes the space in buildings as well as the nature areas in our environment. This creates permanent competition between the various claims for the same area – spaces must be designed or redeveloped while focusing on enhancing usability and sustainable quality maintenance.

In order to solve these spatial problems sustainably, two key elements are required as tools, without which it would be difficult to provide a professional solution: the first is specialist knowledge on which spatial uses or infrastructures to plan and manage, and how; the other is sophisticated, proven IT solutions developed by us to provide targeted and forward-looking results. These two key elements have established IP SYSCON GmbH as a company providing core competences from a single source.

About IP SYSCON GmbH

IP SYSCON GmbH is an established GIS and CAFM software and services company operating in Germany and Europe for more than twenty years. The company supports clients in public administration and the private sector through an extensive branch network.

The services as a GIS and CAFM provider include the development and distribution of the corresponding standard software and solutions, comprehensive consultation, coordinated (data) services, sustainable support as well as tailored training on request and meeting the responsibilities associated with „one-stop solutions”.

As one of the largest Esri Gold and pit - cup partners, we have developed a comprehensive, open and scalable product and service portfolio in our work to date. IP SYSCON GmbH uses a variety of sophisticated technical and content-related specialist applications for its wide-ranging projects. These fulfil the practical requirements of users in a variety of disciplines.

In addition to the standard solutions for all areas of GIS and CAFM, individual project solutions, the integration of Geographic information systems (GIS) and CAFM (Computer-Aided Facility Management) into existing IT landscapes and renewable energy solutions (including solar potential analysis) complete the range of services offered by IP SYSCON GmbH.

We are there for you to solve your spatial problems sustainably!
